

Лабораторная работа 3

Администрирование сетевых подсистем

Чигладзе М.В.

29 мая 2003

Российский университет дружбы народов, Москва, Россия

Информация

- Чигладзе Майя Владиславовна
- студент РУДН направления Прикладная информатика
- заместитель ОСК профсоюза РУДН
- волонтер университета и Москвы
- [1132239399@pfur.ru]
- <https://github.com/LaMeru>

Вводная часть

Целью данной работы является приобретение практических навыков по установке и конфигурированию DHCP-сервера.

DHCP - автоматизация IP-конфигурации устройств в сети, упрощение администрирования, предотвращение конфликтов адресов.

Методы:

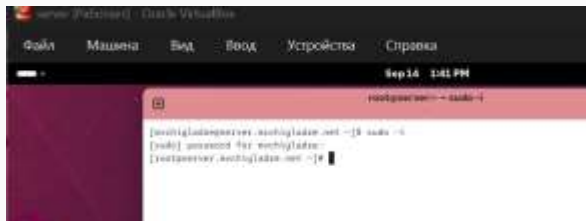

- Установка DHCP-сервера.
- Редактирование конфигурации (диапазон IP, маска, шлюз, DNS).
- Настройка опций (время аренды, суффикс, NTP).
- Статические назначения (резервирование по MAC).
- Тестирование (получение IP клиентами).
- Анализ логов.

Материалы:

- Компьютер с ОС (Linux/Windows).
- ПО DHCP-сервера (isc-dhcp-server, Windows DHCP Server).
- Текстовый редактор.
- Клиентские устройства.
- Сетевые кабели.
- Документация по DHCP.

Выполнение лабораторной работы

Установка DHCP-сервера

```
Running scriptlet: kea-2.6.3-1.el10_0.x86_64
Installing      : kea-2.6.3-1.el10_0.x86_64
Running scriptlet: kea-2.6.3-1.el10_0.x86_64
```

Installed:

```
kea-2.6.3-1.el10_0.x86_64      kea-
mariadb-connector-c-3.4.4-1.el10.x86_64 mariadb
```

Complete!

```
[root@server.mvchigladze.net ~]#
```

Рис. 1. Переход в режим суперпользователя и установка dhcp.

Конфигурирование DHCP-сервера

```
root@server:~# sudo -i
[mvchigladze@server:mvchigladze.net ~]$ sudo -i
[sudo] password for mvchigladze:
[root@server:mvchigladze.net ~]# cp /etc/kea/kea-dhcp4.conf /etc/kea/
/kea-dhcp4.conf__$(date +%I)
[root@server:mvchigladze.net ~]#
```

Рис. 3. Копирование файла примера конфигурации DHCP и изменение его названия.

```
root@server:~# cat /etc/kea/kea-dhcp4.conf
// don't need to remember the code names. However, some people like
// to use numerical values. For example, option 'domain-name' uses
// option code 15, so you can reference it by either by
// "name": "domain-name" or "code": 15.
{
    "code": 15,
    "data": "mvchigladze.net"
},

// Domain search is also a popular option. It tells the client to
// attempt to resolve names within those specified domains. For
// example, name "foo" would be attempted to be resolved as
// foo.mydomain.example.com and if it fails, then as foo.example.com
{
    "name": "domain-search",
    "data": "mvchigladze.net"
},

// String options that have a comma in their values need to have
// it escaped (i.e. each comma is preceded by two backslashes),
// That's because commas are reserved for separating fields to
```

Рис. 4. Открытие файла /etc/dhcp/dhcpd.conf на редактирование.

Конфигурирование DHCP-сервера

```
"Dhcp4": {  
  "interfaces-config": {  
    "interfaces": [eth1 ]  
  },  
  
  // "control-socket": {
```

```
[root@server ~]# systemctl restart dhcpd

файле /etc/named.conf

Настройка обновления DNS-зоны

```
server {
    #DNS zone 8.1
    zone mvchigladze.net {
        // Provided by Red Hat caching-nameserver package
        //
        // The BIND named core configuration file zone recommended by
        // RFC 1035 section 4.1 : localhost TLDs and address zones
        // and /etc/named.conf: options {
        // and /etc/named.conf: options {
        // (c)2007 R H Hanks
        //
        // See /usr/share/doc/bind-9.4.1/sample for example named configuration files.
        //
        // Note: empty-cache-purge yes; option is default.
        // If private zones should be purged, add
        // disable-empty-zone "."; (etc options)
        //
        zone "mvchigladze.net" {
            type master;
            file "master/vchigladze.conf";
            update-policy {
                grant BACKUP,UPDATE allowall "mvchigladze.net" A DDCID;
            }
        };

        zone "1.168.100.in-addr.arpa" {
            type master;
            file "master/vrr/168.100.1";
            update-policy {
                grant BACKUP,UPDATE allowall "1.168.100.in-addr.arpa" PTR DDCID;
            }
        };
    };
}
```

Рис. 23. Поправим права доступа

```
root@server.mvchigladze.net ~]# named-checkconf
root@server.mvchigladze.net ~]#
```

Рис. 24. Подключим ключ в файле /etc/named.conf

Настройка обновления DNS-зоны

```
[root@server.mvchigladze.net ~]# systemctl restart named  
[root@server.mvchigladze.net ~]# touch /etc/kea/tsig-keys.json
```

```
[root@server.mvchigladze.net ~]# named-checkconf  
[root@server.mvchigladze.net ~]# systemctl restart named  
[root@server.mvchigladze.net ~]#
```

Рис. 22. Сделаем проверку
конфигурационного файла:
named-checkconf

Рис. 23. Перезапустите DNS-
сервер:
systemctl restart named

Настройка обновления DNS-зоны

Рис. 24. Сформируем ключ для
Kea. Файл ключа назовём
/etc/kea/tsig-keys.json:
touch /etc/kea/tsig-keys.json

Рис. 25. Перенесём ключ на
сервер Kea DHCP и перепишем
его в формате json

Настройка обновления DNS-зоны

```
[root@server.mvchigladze.net ~]# chown kea:kea /etc/kea/tsig-keys.json  
[root@server.mvchigladze.net ~]# chmod 640 /etc/kea/tsig-keys.json  
[root@server.mvchigladze.net ~]#
```

Рис. 25. Сменим владельца:
`chown kea:kea /etc/kea/tsig-keys.json`

Рис. 26. Поправим права доступа:
`chmod 640 /etc/kea/tsig-keys.json`

Настройка обновления DNS-зоны

```
[root@server.mvchigladze.net ~]# chown kea:kea /etc/kea/kea-dhcp-ddns.conf
[root@server.mvchigladze.net ~]# kea-dhcp-ddns -t /etc/kea/kea-dhcp-ddns.conf

Рис. 37. Проверим статус:
systemctl status kea-dhcp4.service

```
[mitch@centos-client ~]$ nmcli connection down eth1
Connection 'eth1' successfully deactivated (D-Bus active path: /org/freedesktop/NetworkManager/ActiveConnection/5)
[mitch@centos-client ~]$ nmcli connection up eth1
Connection successfully activated (D-Bus active path: /org/freedesktop/NetworkManager/ActiveConnection/7)
[mitch@centos-client ~]$
```

Рис. 38. На машине client
переполучите адрес:
nmcli connection down eth1
nmcli connection up eth1

Анализ работы DHCP-сервера после настройки обновления DNS-зоны

[illegible]

Рис. 43. Анализ работы DHCP-сервера после настройки обновления DNS-зоны

Внесение изменений в настройки внутреннего окружения виртуальной машины

```
[root@server.mvchigladze.net fs]# ls
mvchigladze.net
[root@server.mvchigladze.net fs]# cd /vagrant/provision/server
[root@server.mvchigladze.net server]# mkdir -p /vagrant/provision/server/dhcp/etc/kea
[root@server.mvchigladze.net server]# cp -R /etc/kea/* /vagrant/provision/server/dhcp/etc/kea/
[root@server.mvchigladze.net server]#
```

```
[root@server.mvchigladze.net ~]# cp -R /etc/named/* /vagrant/
/provision/server/dns/etc/named/
cp: overwrite '/vagrant/provision/server/dns/etc/named/mvchi
gladze.net'? y
[root@server.mvchigladze.net ~]# y
bash: y: command not found...
[root@server.mvchigladze.net ~]# cd /vagrant/provision/server
[root@server.mvchigladze.net server]# touch dhcp.sh
[root@server.mvchigladze.net server]# chmod +x dhcp.sh
[root@server.mvchigladze.net server]#
```

Рис. 44. На виртуальной машине server перейдите в каталог для внесения изменений

Рис 45. Замените конфигурационные файлы DNS-сервера:

Внесение изменений в настройки внутреннего окружения виртуальной машины

```
[root@server.mvchigladze.net ~]# cp -R /etc/named/* /vagrant
/provision/server/dns/etc/named/
cp: overwrite '/vagrant/provision/server/dns/etc/named/mvchi
gladze.net' ? y
[root@server.mvchigladze.net ~]# y
bash: y: command not found...
[root@server.mvchigladze.net ~]# cd /vagrant/provision/serve
r
[root@server.mvchigladze.net server]# touch dhcp.sh
[root@server.mvchigladze.net server]# chmod +x dhcp.sh
[root@server.mvchigladze.net server]#
```

```
GNU nano 8.1 dhcp.sh
#!/bin/bash
echo "Provisioning script 50"
echo "Install needed packages"
dnf -y install kea
echo "Copy configuration files"
cp -R /vagrant/provision/server/dhcp/etc/kea/* /etc/kea/
echo "Fix permissions"
chown -R kea:kea /etc/kea
chmod 640 /etc/kea/tsig-keys.json
restorecon -vR /etc
restorecon -vR /var/lib/kea
echo "Configure firewall"
firewall-cmd --add-service dhcp
firewall-cmd --add-service dhcp --permanent
echo "Start dhcpd service"
systemctl --system daemon-reload
systemctl enable --now kea-dhcp4.service
systemctl enable --now kea-dhcp-ddns.service
```

Рис. 46. В каталоге /vagrant/provision/server создайте исполняемый файл dhcp.sh

Внесение изменений в настройки внутреннего окружения виртуальной машины

Рис. 48. Для отработки созданного скрипта во время загрузки виртуальной машины server в конфигурационном файле Vagrantfile

Результаты

В ходе выполнения лабораторной работы были приобретены практические навыки по установке и конфигурированию DHCP-сервера.
